

Armatage CODEFOR Crimes March 2000 vs. March 1999

Understanding CODEFOR Statistics

The Minneapolis Police Department generates statistics each week for its CODEFOR Meetings. These statistics use the same crime categories as the Uniform Crime Report Part I offenses, but are counted differently (see example below). We will call the statistics generated by the CODEFOR Unit the CODEFOR Statistics to distinguish them from the Uniform Crime Report (UCR) Statistics.

The UCR crime groupings are broken into Part I and Part II offenses with the Part I offenses having been chosen by the U.S. Department of Justice as indicator crimes of the level of criminality of a community. The Part I offenses generally include some of the most serious offenses but it also includes crimes of less seriousness when viewed individually. The Department of Justice is looking at offenses that are individually serious (i.e. Homicide or robbery) and offenses when viewed as a group are an indicator of a community's criminality (i.e. Larceny/Theft). At the inception of the CODEFOR process a decision was made to use the Part I group of crimes as our indicators of progress. Special computer programs were written to tally the Part I crime categories for the CODEFOR process. These programs count the offenses differently than does the software the department uses to produce the official Uniform Crime Report statistics each month consequently direct comparisons between the two should not be made. Both programs and resulting counts have been checked for accuracy. Both programs count things correctly; the results may be different because the programs are designed that way.

The differences can be explained with an example. A crime event may contain multiple offenses. The UCR counts only the most serious offense in the event whereas the CODEFOR Statistics counts each offense, resulting in higher counts. The UCR is counted based on the date the offense was reported to the MPD, the CODEFOR Statistics are counted based on the date the victim said the offense started. These are often different. For example, a victim reports on August 1st that her apartment was broken into, her purse and cash stolen and that she was raped and that the crime occurred on July 31. The UCR will count one offense of rape (the most serious offense) in August (the month reported). CODEFOR statistics will count one rape, one burglary and one theft in July.

| Offense | 2000 | 1999 | % Change |
|--------------------|----------|----------|-----------|
| Homicide | 0 | 0 | #DIV/0! |
| Rape | 0 | 0 | #DIV/0! |
| Robbery | 0 | 0 | #DIV/0! |
| Aggravated Assault | 0 | 0 | #DIV/0! |
| Burglary | 1 | 0 | #DIV/0! |
| Larceny | 6 | 6 | 0% |
| Auto Theft | 1 | 2 | -50% |
| Arson | 0 | 0 | #DIV/0! |
| Total | 8 | 8 | 0% |

Percentage change of "#DIV/0!" indicates a noncalculable operation

These statistics use the same crime categories as the Uniform Crime Report Part I offenses, but are counted differently (see example below). We will call the statistics generated by the CODEFOR Unit the CODEFOR Statistics to distinguish them from the Uniform Crime Report (UCR) Statistics.

The UCR crime groupings are broken into Part I and Part II offenses with the Part I offenses having been chosen by the U.S. Department of Justice as indicator crimes of the level of criminality of a community. The Part I offenses generally include some of the most serious offenses but it also includes crimes of less seriousness when viewed individually. The Department of Justice is looking at offenses that are individually serious (i.e. Homicide or robbery) and offenses when viewed as a group are an indicator of a community's criminality (i.e. Larceny/Theft). At the inception of the CODEFOR process a decision was made to use the Part I group of crimes as our indicators of progress. Special computer programs were written to tally the Part I crime categories for the CODEFOR process. These programs count the offenses differently than does the software the department uses to produce the official Uniform Crime Report statistics each month consequently direct comparisons between the two should not be made. Both programs and resulting counts have been checked for accuracy. Both programs count things correctly; the results may be different because the programs are designed that way.

The differences can be explained with an example. A crime event may contain multiple offenses. The UCR counts only the most serious offense in the event whereas the CODEFOR Statistics counts each offense, resulting in higher counts. The UCR is counted based on the date the offense was reported to the MPD, the CODEFOR Statistics are counted based on the date the victim said the offense started. These are often different. For example, a victim reports on August 1st that her apartment was broken into, her purse and cash stolen and that she was raped and that the crime occurred on July 31. The UCR will count one offense of rape (the most serious offense) in August (the month reported). CODEFOR statistics will count one rape, one burglary and one theft in July.

| Offense | 2000 | 1999 | % Change |

Understanding CODEFOR Statistics

The Minneapolis Police Department generates statistics each week for its CODEFOR Meetings. These statistics use the same crime categories as the Uniform Crime Report Part I offenses, but are counted differently (see example below). We will call the statistics generated by the CODEFOR Unit the CODEFOR Statistics to distinguish them from the Uniform Crime Report (UCR) Statistics.

The UCR crime groupings are broken into Part I and Part II offenses with the Part I offenses having been chosen by the U.S. Department of Justice as indicator crimes of the level of criminality of a community. The Part I offenses generally include some of the most serious offenses but it also includes crimes of less seriousness when viewed individually. The Department of Justice is looking at offenses that are individually serious (i.e. Homicide or robbery) and offenses when viewed as a group are an indicator of a community's criminality (i.e. Larceny/Theft). At the inception of the CODEFOR process a decision was made to use the Part I group of crimes as our indicators of progress. Special computer programs were written to tally the Part I crime categories for the CODEFOR process. These programs count the offenses differently than does the software the department uses to produce the official Uniform Crime Report statistics each month consequently direct comparisons between the two should not be made. Both programs and resulting counts have been checked for accuracy. Both programs count things correctly; the results may be different because the programs are designed that way.

The differences can be explained with an example. A crime event may contain multiple offenses. The UCR counts only the most serious offense in the event whereas the CODEFOR Statistics counts each offense, resulting in higher counts. The UCR is counted based on the date the offense was reported to the MPD, the CODEFOR Statistics are counted based on the date the victim said the offense started. These are often different. For example, a victim reports on August 1st that her apartment was broken into, her purse and cash stolen and that she was raped and that the crime occurred on July 31. The UCR will count one offense of rape (the most serious offense) in August (the month reported). CODEFOR statistics will count one rape, one burglary and one theft in July.

| Offense | 2000 | 1999 | % Change |
|--------------------|-------------|-------------|-----------------|

East Isles CODEFOR Crimes March 2000 vs. March 1999

Understanding CODEFOR Statistics

The Minneapolis Police Department generates statistics each week for its CODEFOR Meetings. These statistics use the same crime categories as the Uniform Crime Report Part I offenses, but are counted differently (see example below). We will call the statistics generated by the CODEFOR Unit the CODEFOR Statistics to distinguish them from the Uniform Crime Report (UCR) Statistics.

The UCR crime groupings are broken into Part I and Part II offenses with the Part I offenses having been chosen by the U.S. Department of Justice as indicator crimes of the level of criminality of a community. The Part I offenses generally include some of the most serious offenses but it also includes crimes of less seriousness when viewed individually. The Department of Justice is looking at offenses that are individually serious (i.e. Homicide or robbery) and offenses when viewed as a group are an indicator of a community's criminality (i.e. Larceny/Theft). At the inception of the CODEFOR process a decision was made to use the Part I group of crimes as our indicators of progress. Special computer programs were written to tally the Part I crime categories for the CODEFOR process. These programs count the offenses differently than does the software the department uses to produce the official Uniform Crime Report statistics each month consequently direct comparisons between the two should not be made. Both programs and resulting counts have been checked for accuracy. Both programs count things correctly; the results may be different because the programs are designed that way.

The differences can be explained with an example. A crime event may contain multiple offenses. The UCR counts only the most serious offense in the event whereas the CODEFOR Statistics counts each offense, resulting in higher counts. The UCR is counted based on the date the offense was reported to the MPD, the CODEFOR Statistics are counted based on the date the victim said the offense started. These are often different. For example, a victim reports on August 1st that her apartment was broken into, her purse and cash stolen and that she was raped and that the crime occurred on July 31. The UCR will count one offense of rape (the most serious offense) in August (the month reported). CODEFOR statistics will count one rape, one burglary and one theft in July.

| Offense | 2000 | 1999 | % Change |

Hawthorne CODEFOR Crimes March 2000 vs. March 1999

Understanding CODEFOR Statistics

The Minneapolis Police Department generates statistics each week for its CODEFOR Meetings. These statistics use the same crime categories as the Uniform Crime Report Part I offenses, but are counted differently (see example below). We will call the statistics generated by the CODEFOR Unit the CODEFOR Statistics to distinguish them from the Uniform Crime Report (UCR) Statistics.

The UCR crime groupings are broken into Part I and Part II offenses with the Part I offenses having been chosen by the U.S. Department of Justice as indicator crimes of the level of criminality of a community. The Part I offenses generally include some of the most serious offenses but it also includes crimes of less seriousness when viewed individually. The Department of Justice is looking at offenses that are individually serious (i.e. Homicide or robbery) and offenses when viewed as a group are an indicator of a community's criminality (i.e. Larceny/Theft). At the inception of the CODEFOR process a decision was made to use the Part I group of crimes as our indicators of progress. Special computer programs were written to tally the Part I crime categories for the CODEFOR process. These programs count the offenses differently than does the software the department uses to produce the official Uniform Crime Report statistics each month consequently direct comparisons between the two should not be made. Both programs and resulting counts have been checked for accuracy. Both programs count things correctly; the results may be different because the programs are designed that way.

The differences can be explained with an example. A crime event may contain multiple offenses. The UCR counts only the most serious offense in the event whereas the CODEFOR Statistics counts each offense, resulting in higher counts. The UCR is counted based on the date the offense was reported to the MPD, the CODEFOR Statistics are counted based on the date the victim said the offense started. These are often different. For example, a victim reports on August 1st that her apartment was broken into, her purse and cash stolen and that she was raped and that the crime occurred on July 31. The UCR will count one offense of rape (the most serious offense) in August (the month reported). CODEFOR statistics will count one rape, one burglary and one theft in July.

| Offense | 2000 | 1999 | % Change |
|--------------------|-----------|-----------|-------------|

Hiawatha CODEFOR Crimes March 2000 vs. March 1999

Understanding CODEFOR Statistics

The Minneapolis Police Department generates statistics each week for its CODEFOR Meetings. These statistics use the same crime categories as the Uniform Crime Report Part I offenses, but are counted differently (see example below). We will call the statistics generated by the CODEFOR Unit the CODEFOR Statistics to distinguish them from the Uniform Crime Report (UCR) Statistics.

The UCR crime groupings are broken into Part I and Part II offenses with the Part I offenses having been chosen by the U.S. Department of Justice as indicator crimes of the level of criminality of a community. The Part I offenses generally include some of the most serious offenses but it also includes crimes of less seriousness when viewed individually. The Department of Justice is looking at offenses that are individually serious (i.e. Homicide or robbery) and offenses when viewed as a group are an indicator of a community's criminality (i.e. Larceny/Theft). At the inception of the CODEFOR process a decision was made to use the Part I group of crimes as our indicators of progress. Special computer programs were written to tally the Part I crime categories for the CODEFOR process. These programs count the offenses differently than does the software the department uses to produce the official Uniform Crime Report statistics each month consequently direct comparisons between the two should not be made. Both programs and resulting counts have been checked for accuracy. Both programs count things correctly; the results may be different because the programs are designed that way.

The differences can be explained with an example. A crime event may contain multiple offenses. The UCR counts only the most serious offense in the event whereas the CODEFOR Statistics counts each offense, resulting in higher counts. The UCR is counted based on the date the offense was reported to the MPD, the CODEFOR Statistics are counted based on the date the victim said the offense started. These are often different. For example, a victim reports on August 1st that her apartment was broken into, her purse and cash stolen and that she was raped and that the crime occurred on July 31. The UCR will count one offense of rape (the most serious offense) in August (the month reported). CODEFOR statistics will count one rape, one burglary and one theft in July.

Lind-Bohanon CODEFOR Crimes March 2000 vs. March 1999

Understanding CODEFOR Statistics

The Minneapolis Police Department generates statistics each week for its CODEFOR Meetings. These statistics use the same crime categories as the Uniform Crime Report Part I offenses, but are counted differently (see example below). We will call the statistics generated by the CODEFOR Unit the CODEFOR Statistics to distinguish them from the Uniform Crime Report (UCR) Statistics.

The UCR crime groupings are broken into Part I and Part II offenses with the Part I offenses having been chosen by the U.S. Department of Justice as indicator crimes of the level of criminality of a community. The Part I offenses generally include some of the most serious offenses but it also includes crimes of less seriousness when viewed individually. The Department of Justice is looking at offenses that are individually serious (i.e. Homicide or robbery) and offenses when viewed as a group are an indicator of a community's criminality (i.e. Larceny/Theft). At the inception of the CODEFOR process a decision was made to use the Part I group of crimes as our indicators of progress. Special computer programs were written to tally the Part I crime categories for the CODEFOR process. These programs count the offenses differently than does the software the department uses to produce the official Uniform Crime Report statistics each month consequently direct comparisons between the two should not be made. Both programs and resulting counts have been checked for accuracy. Both programs count things correctly; the results may be different because the programs are designed that way.

The differences can be explained with an example. A crime event may contain multiple offenses. The UCR counts only the most serious offense in the event whereas the CODEFOR Statistics counts each offense, resulting in higher counts. The UCR is counted based on the date the offense was reported to the MPD, the CODEFOR Statistics are counted based on the date the victim said the offense started. These are often different. For example, a victim reports on August 1st that her apartment was broken into, her purse and cash stolen and that she was raped and that the crime occurred on July 31. The UCR will count one offense of rape (the most serious offense) in August (the month reported). CODEFOR statistics will count one rape, one burglary and one theft in July.

| Offense | 2000 | 1999 | % Change |

Linden Hills CODEFOR Crimes March 2000 vs. March 1999

Understanding CODEFOR Statistics

The Minneapolis Police Department generates statistics each week for its CODEFOR Meetings. These statistics use the same crime categories as the Uniform Crime Report Part I offenses, but are counted differently (see example below). We will call the statistics generated by the CODEFOR Unit the CODEFOR Statistics to distinguish them from the Uniform Crime Report (UCR) Statistics.

The UCR crime groupings are broken into Part I and Part II offenses with the Part I offenses having been chosen by the U.S. Department of Justice as indicator crimes of the level of criminality of a community. The Part I offenses generally include some of the most serious offenses but it also includes crimes of less seriousness when viewed individually. The Department of Justice is looking at offenses that are individually serious (i.e. Homicide or robbery) and offenses when viewed as a group are an indicator of a community's criminality (i.e. Larceny/Theft). At the inception of the CODEFOR process a decision was made to use the Part I group of crimes as our indicators of progress. Special computer programs were written to tally the Part I crime categories for the CODEFOR process. These programs count the offenses differently than does the software the department uses to produce the official Uniform Crime Report statistics each month consequently direct comparisons between the two should not be made. Both programs and resulting counts have been checked for accuracy. Both programs count things correctly; the results may be different because the programs are designed that way.

The differences can be explained with an example. A crime event may contain multiple offenses. The UCR counts only the most serious offense in the event whereas the CODEFOR Statistics counts each offense, resulting in higher counts. The UCR is counted based on the date the offense was reported to the MPD, the CODEFOR Statistics are counted based on the date the victim said the offense started. These are often different. For example, a victim reports on August 1st that her apartment was broken into, her purse and cash stolen and that she was raped and that the crime occurred on July 31. The UCR will count one offense of rape (the most serious offense) in August (the month reported). CODEFOR statistics will count one rape, one burglary and one theft in July.

| Offense | 2000 | 1999 | % Change |

Marshall Terrace CODEFOR Crimes March 2000 vs. March 1999

Understanding CODEFOR Statistics

The Minneapolis Police Department generates statistics each week for its CODEFOR Meetings. These statistics use the same crime categories as the Uniform Crime Report Part I offenses, but are counted differently (see example below). We will call the statistics generated by the CODEFOR Unit the CODEFOR Statistics to distinguish them from the Uniform Crime Report (UCR) Statistics.

The UCR crime groupings are broken into Part I and Part II offenses with the Part I offenses having been chosen by the U.S. Department of Justice as indicator crimes of the level of criminality of a community. The Part I offenses generally include some of the most serious offenses but it also includes crimes of less seriousness when viewed individually. The Department of Justice is looking at offenses that are individually serious (i.e. Homicide or robbery) and offenses when viewed as a group are an indicator of a community's criminality (i.e. Larceny/Theft). At the inception of the CODEFOR process a decision was made to use the Part I group of crimes as our indicators of progress. Special computer programs were written to tally the Part I crime categories for the CODEFOR process. These programs count the offenses differently than does the software the department uses to produce the official Uniform Crime Report statistics each month consequently direct comparisons between the two should not be made. Both programs and resulting counts have been checked for accuracy. Both programs count things correctly; the results may be different because the programs are designed that way.

The differences can be explained with an example. A crime event may contain multiple offenses. The UCR counts only the most serious offense in the event whereas the CODEFOR Statistics counts each offense, resulting in higher counts. The UCR is counted based on the date the offense was reported to the MPD, the CODEFOR Statistics are counted based on the date the victim said the offense started. These are often different. For example, a victim reports on August 1st that her apartment was broken into, her purse and cash stolen and that she was raped and that the crime occurred on July 31. The UCR will count one offense of rape (the most serious offense) in August (the month reported). CODEFOR statistics will count one rape, one burglary and one theft in July.

McKinley CODEFOR Crimes March 2000 vs. March 1999

Understanding CODEFOR Statistics

The Minneapolis Police Department generates statistics each week for its CODEFOR Meetings. These statistics use the same crime categories as the Uniform Crime Report Part I offenses, but are counted differently (see example below). We will call the statistics generated by the CODEFOR Unit the CODEFOR Statistics to distinguish them from the Uniform Crime Report (UCR) Statistics.

The UCR crime groupings are broken into Part I and Part II offenses with the Part I offenses having been chosen by the U.S. Department of Justice as indicator crimes of the level of criminality of a community. The Part I offenses generally include some of the most serious offenses but it also includes crimes of less seriousness when viewed individually. The Department of Justice is looking at offenses that are individually serious (i.e. Homicide or robbery) and offenses when viewed as a group are an indicator of a community's criminality (i.e. Larceny/Theft). At the inception of the CODEFOR process a decision was made to use the Part I group of crimes as our indicators of progress. Special computer programs were written to tally the Part I crime categories for the CODEFOR process. These programs count the offenses differently than does the software the department uses to produce the official Uniform Crime Report statistics each month consequently direct comparisons between the two should not be made. Both programs and resulting counts have been checked for accuracy. Both programs count things correctly; the results may be different because the programs are designed that way.

The differences can be explained with an example. A crime event may contain multiple offenses. The UCR counts only the most serious offense in the event whereas the CODEFOR Statistics counts each offense, resulting in higher counts. The UCR is counted based on the date the offense was reported to the MPD, the CODEFOR Statistics are counted based on the date the victim said the offense started. These are often different. For example, a victim reports on August 1st that her apartment was broken into, her purse and cash stolen and that she was raped and that the crime occurred on July 31. The UCR will count one offense of rape (the most serious offense) in August (the month reported). CODEFOR statistics will count one rape, one burglary and one theft in July.

Northrup CODEFOR Crimes March 2000 vs. March 1999

Understanding CODEFOR Statistics

The Minneapolis Police Department generates statistics each week for its CODEFOR Meetings. These statistics use the same crime categories as the Uniform Crime Report Part I offenses, but are counted differently (see example below). We will call the statistics generated by the CODEFOR Unit the CODEFOR Statistics to distinguish them from the Uniform Crime Report (UCR) Statistics.

The UCR crime groupings are broken into Part I and Part II offenses with the Part I offenses having been chosen by the U.S. Department of Justice as indicator crimes of the level of criminality of a community. The Part I offenses generally include some of the most serious offenses but it also includes crimes of less seriousness when viewed individually. The Department of Justice is looking at offenses that are individually serious (i.e. Homicide or robbery) and offenses when viewed as a group are an indicator of a community's criminality (i.e. Larceny/Theft). At the inception of the CODEFOR process a decision was made to use the Part I group of crimes as our indicators of progress. Special computer programs were written to tally the Part I crime categories for the CODEFOR process. These programs count the offenses differently than does the software the department uses to produce the official Uniform Crime Report statistics each month consequently direct comparisons between the two should not be made. Both programs and resulting counts have been checked for accuracy. Both programs count things correctly; the results may be different because the programs are designed that way.

The differences can be explained with an example. A crime event may contain multiple offenses. The UCR counts only the most serious offense in the event whereas the CODEFOR Statistics counts each offense, resulting in higher counts. The UCR is counted based on the date the offense was reported to the MPD, the CODEFOR Statistics are counted based on the date the victim said the offense started. These are often different. For example, a victim reports on August 1st that her apartment was broken into, her purse and cash stolen and that she was raped and that the crime occurred on July 31. The UCR will count one offense of rape (the most serious offense) in August (the month reported). CODEFOR statistics will count one rape, one burglary and one theft in July.

| Offense | 2000 | 1999 | % Change |

CODEFOR Crimes
March 2000 vs. March 1999

Understanding CODEFOR Statistics

The Minneapolis Police Department generates statistics each week for its CODEFOR Meetings. These statistics use the same crime categories as the Uniform Crime Report Part I offenses, but are counted differently (see example below). We will call the statistics generated by the CODEFOR Unit the CODEFOR Statistics to distinguish them from the Uniform Crime Report (UCR) Statistics.

The UCR crime groupings are broken into Part I and Part II offenses with the Part I offenses having been chosen by the U.S. Department of Justice as indicator crimes of the level of criminality of a community. The Part I offenses generally include some of the most serious offenses but it also includes crimes of less seriousness when viewed individually. The Department of Justice is looking at offenses that are individually serious (i.e. Homicide or robbery) and offenses when viewed as a group are an indicator of a community's criminality (i.e. Larceny/Theft). At the inception of the CODEFOR process a decision was made to use the Part I group of crimes as our indicators of progress. Special computer programs were written to tally the Part I crime categories for the CODEFOR process. These programs count the offenses differently than does the software the department uses to produce the official Uniform Crime Report statistics each month consequently direct comparisons between the two should not be made. Both programs and resulting counts have been checked for accuracy. Both programs count things correctly; the results may be different because the programs are designed that way.

The differences can be explained with an example. A crime event may contain multiple offenses. The UCR counts only the most serious offense in the event whereas the CODEFOR Statistics counts each offense, resulting in higher counts. The UCR is counted based on the date the offense was reported to the MPD, the CODEFOR Statistics are counted based on the date the victim said the offense started. These are often different. For example, a victim reports on August 1st that her apartment was broken into, her purse and cash stolen and that she was raped and that the crime occurred on July 31. The UCR will count one offense of rape (the most serious offense) in August (the month reported). CODEFOR statistics will count one rape, one burglary and one theft in July.

St. Anthony West CODEFOR Crimes March 2000 vs. March 1999

Understanding CODEFOR Statistics

The Minneapolis Police Department generates statistics each week for its CODEFOR Meetings. These statistics use the same crime categories as the Uniform Crime Report Part I offenses, but are counted differently (see example below). We will call the statistics generated by the CODEFOR Unit the CODEFOR Statistics to distinguish them from the Uniform Crime Report (UCR) Statistics.

The UCR crime groupings are broken into Part I and Part II offenses with the Part I offenses having been chosen by the U.S. Department of Justice as indicator crimes of the level of criminality of a community. The Part I offenses generally include some of the most serious offenses but it also includes crimes of less seriousness when viewed individually. The Department of Justice is looking at offenses that are individually serious (i.e. Homicide or robbery) and offenses when viewed as a group are an indicator of a community's criminality (i.e. Larceny/Theft). At the inception of the CODEFOR process a decision was made to use the Part I group of crimes as our indicators of progress. Special computer programs were written to tally the Part I crime categories for the CODEFOR process. These programs count the offenses differently than does the software the department uses to produce the official Uniform Crime Report statistics each month consequently direct comparisons between the two should not be made. Both programs and resulting counts have been checked for accuracy. Both programs count things correctly; the results may be different because the programs are designed that way.

The differences can be explained with an example. A crime event may contain multiple offenses. The UCR counts only the most serious offense in the event whereas the CODEFOR Statistics counts each offense, resulting in higher counts. The UCR is counted based on the date the offense was reported to the MPD, the CODEFOR Statistics are counted based on the date the victim said the offense started. These are often different. For example, a victim reports on August 1st that her apartment was broken into, her purse and cash stolen and that she was raped and that the crime occurred on July 31. The UCR will count one offense of rape (the most serious offense) in August (the month reported). CODEFOR statistics will count one rape, one burglary and one theft in July.

Standish CODEFOR Crimes March 2000 vs. March 1999

Understanding CODEFOR Statistics

The Minneapolis Police Department generates statistics each week for its CODEFOR Meetings. These statistics use the same crime categories as the Uniform Crime Report Part I offenses, but are counted differently (see example below). We will call the statistics generated by the CODEFOR Unit the CODEFOR Statistics to distinguish them from the Uniform Crime Report (UCR) Statistics.

The UCR crime groupings are broken into Part I and Part II offenses with the Part I offenses having been chosen by the U.S. Department of Justice as indicator crimes of the level of criminality of a community. The Part I offenses generally include some of the most serious offenses but it also includes crimes of less seriousness when viewed individually. The Department of Justice is looking at offenses that are individually serious (i.e. Homicide or robbery) and offenses when viewed as a group are an indicator of a community's criminality (i.e. Larceny/Theft). At the inception of the CODEFOR process a decision was made to use the Part I group of crimes as our indicators of progress. Special computer programs were written to tally the Part I crime categories for the CODEFOR process. These programs count the offenses differently than does the software the department uses to produce the official Uniform Crime Report statistics each month consequently direct comparisons between the two should not be made. Both programs and resulting counts have been checked for accuracy. Both programs count things correctly; the results may be different because the programs are designed that way.

The differences can be explained with an example. A crime event may contain multiple offenses. The UCR counts only the most serious offense in the event whereas the CODEFOR Statistics counts each offense, resulting in higher counts. The UCR is counted based on the date the offense was reported to the MPD, the CODEFOR Statistics are counted based on the date the victim said the offense started. These are often different. For example, a victim reports on August 1st that her apartment was broken into, her purse and cash stolen and that she was raped and that the crime occurred on July 31. The UCR will count one offense of rape (the most serious offense) in August (the month reported). CODEFOR statistics will count one rape, one burglary and one theft in July.

| Offense | 2000 | 1999 | % Change |
|--------------------|-------------|-------------|-----------------|
| Homicide | 0 | 0 | #DIV/0! |
| Rape | 0 | 1 | -100% |
| Robbery | 0 | 0 | #DIV/0! |
| Aggravated Assault | 1 | 4 | -75% |
| Burglary | 8 | 8 | 0% |
| Larceny | 16 | 16 | 0% |
| Auto Theft | 6 | 7 | -14% |
| Arson | 0 | 1 | -100% |
| Total | 31 | 37 | -16% |

West Calhoun CODEFOR Crimes March 2000 vs. March 1999

Understanding CODEFOR Statistics

The Minneapolis Police Department generates statistics each week for its CODEFOR Meetings. These statistics use the same crime categories as the Uniform Crime Report Part I offenses, but are counted differently (see example below). We will call the statistics generated by the CODEFOR Unit the CODEFOR Statistics to distinguish them from the Uniform Crime Report (UCR) Statistics.

The UCR crime groupings are broken into Part I and Part II offenses with the Part I offenses having been chosen by the U.S. Department of Justice as indicator crimes of the level of criminality of a community. The Part I offenses generally include some of the most serious offenses but it also includes crimes of less seriousness when viewed individually. The Department of Justice is looking at offenses that are individually serious (i.e. Homicide or robbery) and offenses when viewed as a group are an indicator of a community's criminality (i.e. Larceny/Theft). At the inception of the CODEFOR process a decision was made to use the Part I group of crimes as our indicators of progress. Special computer programs were written to tally the Part I crime categories for the CODEFOR process. These programs count the offenses differently than does the software the department uses to produce the official Uniform Crime Report statistics each month consequently direct comparisons between the two should not be made. Both programs and resulting counts have been checked for accuracy. Both programs count things correctly; the results may be different because the programs are designed that way.

The differences can be explained with an example. A crime event may contain multiple offenses. The UCR counts only the most serious offense in the event whereas the CODEFOR Statistics counts each offense, resulting in higher counts. The UCR is counted based on the date the offense was reported to the MPD, the CODEFOR Statistics are counted based on the date the victim said the offense started. These are often different. For example, a victim reports on August 1st that her apartment was broken into, her purse and cash stolen and that she was raped and that the crime occurred on July 31. The UCR will count one offense of rape (the most serious offense) in August (the month reported). CODEFOR statistics will count one rape, one burglary and one theft in July.

| Offense | 2000 | 1999 | % Change |
|--------------------|-------------|-------------|-----------------|
| Homicide | 0 | 0 | #DIV/0! |
| Rape | 0 | 0 | #DIV/0! |
| Robbery | 0 | 0 | #DIV/0! |
| Aggravated Assault | 0 | 0 | #DIV/0! |
| Burglary | 1 | 0 | #DIV/0! |
| Larceny | 5 | 5 | 0% |
| Auto Theft | 0 | 0 | #DIV/0! |
| Arson | 0 | 0 | #DIV/0! |
| Total | 6 | 5 | 20% |

Percentage change of "#DIV/0!" indicates a noncalculable operation
Data believed accurate as of 04/06/2000±2.5%

Whittier CODEFOR Crimes March 2000 vs. March 1999

Understanding CODEFOR Statistics

The Minneapolis Police Department generates statistics each week for its CODEFOR Meetings. These statistics use the same crime categories as the Uniform Crime Report Part I offenses, but are counted differently (see example below). We will call the statistics generated by the CODEFOR Unit the CODEFOR Statistics to distinguish them from the Uniform Crime Report (UCR) Statistics.

The UCR crime groupings are broken into Part I and Part II offenses with the Part I offenses having been chosen by the U.S. Department of Justice as indicator crimes of the level of criminality of a community. The Part I offenses generally include some of the most serious offenses but it also includes crimes of less seriousness when viewed individually. The Department of Justice is looking at offenses that are individually serious (i.e. Homicide or robbery) and offenses when viewed as a group are an indicator of a community's criminality (i.e. Larceny/Theft). At the inception of the CODEFOR process a decision was made to use the Part I group of crimes as our indicators of progress. Special computer programs were written to tally the Part I crime categories for the CODEFOR process. These programs count the offenses differently than does the software the department uses to produce the official Uniform Crime Report statistics each month consequently direct comparisons between the two should not be made. Both programs and resulting counts have been checked for accuracy. Both programs count things correctly; the results may be different because the programs are designed that way.

The differences can be explained with an example. A crime event may contain multiple offenses. The UCR counts only the most serious offense in the event whereas the CODEFOR Statistics counts each offense, resulting in higher counts. The UCR is counted based on the date the offense was reported to the MPD, the CODEFOR Statistics are counted based on the date the victim said the offense started. These are often different. For example, a victim reports on August 1st that her apartment was broken into, her purse and cash stolen and that she was raped and that the crime occurred on July 31. The UCR will count one offense of rape (the most serious offense) in August (the month reported). CODEFOR statistics will count one rape, one burglary and one theft in July.

| Offense | 2000 | 1999 | % Change |
|--------------------|-------------|-------------|-----------------|
| Homicide | 0 | 0 | #DIV/0! |
| Rape | 0 | 2 | -100% |
| Robbery | 11 | 5 | 120% |
| Aggravated Assault | 8 | 6 | 33% |
| Burglary | 15 | 23 | -35% |
| Larceny | 59 | 63 | -6% |
| Auto Theft | 7 | 4 | 75% |
| Arson | 1 | 0 | #DIV/0! |
| Total | 101 | 103 | -2% |

Percentage change of "#DIV/0!" indicates a noncalculable operation
